Width 127mm

The **Wise Wi-Fi Interface for Iphone/Android** is a radio transmitter with internet - ethernet connection for controlling, managing and dimming lighting fixtures and creating lighting scenes.

The **Wise Wi-Fi** interface plugs into your Wi-Fi router allowing you to control your wise control products.

The browser can be used on a phone or computer to access twelve 7 button switches to program as you wish. You can change the six switch images that represent each room or area and personalize them to your installation of **Wise Controls**. Each room, switch and button can be labelled to make the user interface simple to use. No app or plug-in is required to use this software on your browser.
