Emergency Type Maintained

Dimensions

Depth	80mm
Height	900mm
Width	80mm

Electrical

Input Voltage	240V
Maximum Wattage	39W

The **Mashiko Wall 900 Emergency** is a bathroom mirror light that can be mounted horizontally or vertically to provide additional light to highlight mirrors, bathroom cabinets and sink area. This fitting has five frosted glass faces allowing light to diffuse in all directions. A 39W fluorescent lamp is incorporated into the fitting, providing sufficient light for tasks such as shaving whilst also meeting the requirements of Part L building regulations on the conservation of power. Additionally, this product has been converted from the original *Mashiko Wall 900* using a specialist pack for emergency operation.

Emergency packs are used in commercial buildings as a safety precaution in the event of a power outage, ensuring that light fittings remain on so that people can find their way out of a building in the event of an emergency.

There are two types of emergency lighting: maintained and non-maintained. Maintained light fittings are illuminated at all times using the same lamps for both normal and emergency operation, whilst non-maintained light fittings only become illuminated in the event of a power failure. This product is a maintained emergency fitting. Please note maintained emergency fittings can also be wired as non-maintained.

This fitting is IP44 rated, allowing for location in bathroom zone 2 (see technical tab). Constructed from steel and glass and finished in polished chrome with integral ballast. It is mains switching only and not dimming compatible. A 39W T5 fluorescent lamp must be purchased separately. Smaller/larger versions of this product as well as matching ceiling lights are also available.
