

**LED Neon Flex** is a versatile and user-friendly lighting device. It can be cut, bent, and formed in the field and is easily installed on the flat surface of varied materials. These include wood, plastic, steel or concrete walls.

The main advantages to using **LED Neon Flex** over similar products is that it provides high and even brightness and long life whilst also being durable and energy saving.

24V Neon Flex can be cut shorter than 240V and is also safer for bathroom, shower or swimming pool lighting.

Please note the price given for this item is per unit length. As it is cut from a 49m reel, this is the maximum continuous length that can be purchased. If you order more than one unit you will receive one continuous run of neon flex.

**Please Note:** 24V LED Neon Flex requires a 24V LED driver sold separately.
