

Cold Cathode Transformers

Electronic Dimmable Neon Converter Upto 2.7m Run
1500V

MR. RESISTOR[®]
Lighting Specialist Est. 1968

NEO 15050 TRANS

1500V

Quicklink: Q3AE7

General

Colour	White
Construction	Polycarbonate
Dimmable	Yes
Dimmable	Yes

Dimensions

Transformer Height	40mm
Transformer Length	188mm
Transformer Width	50mm

Electrical

Amperage	60mA
Transformer	Electronic
Voltage	1500V

A **Electronic Neon Dimmable Converter** for neon and cold cathode lighting. The NEOTRAN-50 and NEOTRAN-100 are high frequency dimmable electronic converters that will operate either Neon (red gas) or Argon (blue gas) tubes, commonly known as neon or cold cathode lighting. Both ranges are fully dimmable with all types of leading or trailing edge dimmers. They have many advantages when compared to wire wound transformers, as they are smaller, lighter and safer.

All models feature open circuit, short circuit and overload protection. The NEOTRAN-50 is available in three sizes from 1.0kV, 75mA to 3.0kV, 25mA and has a maximum input rating of 50VA. The NEOTRAN-100 is available in four sizes from 1.0kV, 150mA to 6.0kV, 25mA and has a maximum input rating of 100VA. All NEOTRANS can be dimmed smoothly for subtle control or they can be flashed or animated for a more dramatic effect.
