Colour Black
Construction Plastic

Dimensions

Depth 25mm
Length 71mm
Width 45mm

Electrical

Maximum Wattage 160W
Minimum Wattage 40W
Voltage 240V

The **240V Slide Dimmer** is an in-line slide dimmer which can be used in conjunction with your incandescent or halogen floor/table lamps. Certain dimmable fluorescent and LEDs may be used also, but the 40W minimum load would have to be adhered to.

To install, simply connect the live and neutral from your plug to the input of the dimmer, and the live and neutral from the lamp to the output of the dimmer.

A maximum of 160W can be dimmed from a single 240V slide dimmer.
