Electrical

Amperage 4A

Voltage 12-24V DC

Klus 1491 LED micro switch for easy control of your tape light fixtures. Designed to work with their existing tape light profiles, this switch fits stealthily within the same profile to give you easy access to each lamp or lighting system. The micro switch operates on either 12 or 24-volt DC systems to match whichever type of tape light you use. Because the switch is typically mounted at the end of a run, special end caps are needed to ensure that everything seals cleanly.

The Micro switch cable includes 125mm power cable.

When mounting Micro Switch into extrusions 11 mm deep, the MW base must be used along with MW end caps - see linked products.
