Black 160W

Quicklink: Q45E8

General

Colour	Black
Construction	Plastic

Electrical

Maximum Wattage	160W
Minimum Wattage	50W
Voltage	12V

The **12V Floor or Table light dimmer** has an electronic transformer incorporated. It has a 240V mains input and a 12V 160W output. This means you are able to use low voltage halogen lamps.**General Characteristics**

- Amperometric protection
- Protection against transitory surge voltages
- Self-resetting protection against short circuit and overload
- Soft-Start mechanism
- Radio frequency interference fitter conforming to EN55015 AM1

Installation

Instruction Use electronic converter exclusively with resistive loads and class 2 and 3 lighting appliancesObserve plate values shownPlace electronic converter away from heat sourcesTighten terminal screw accuratelyMaximum length of connecting cable not more than 2mRemove upper plastic coverCable model. use cable type H03VV-F or H03VV-H2F. Block cable with cable clampsPush spindle of potentiometer to limit stop, replace upper plastic cover after having pushed slider also to limit stopClose plastic cover with screws**Please note:** On the 240V input side the live and neutral cables can be wired to either terminal. On the 12V output side the positive and negative can also be wired to either terminal.
