

KUBIK 45 ANOD

Anodised Aluminium 2000mm
Quicklink: Q48BC

General

Construction Aluminium

Dimensions

Height	17.5mm
Length	2m
Width	17.5mm

Kubik Extrusions Profile are designed for construction of bespoke frames that serve as lighting fixtures for LED tape. The light from the LED tape can be directed inside or outside at an angle of 45° to its sides. It can be used for the construction of custom lamps used for illumination in a standing, hanging, or wall arrangement.

These special extrusions can also be used for exhibition purposes e.g. Kubik structures can illuminate objects displayed within the frame (sculptures, jewelry, plants, bouquets, food products, etc.). Two-dimensional lighting frames can be built as well. These frames can be shaped as cubes or polygons available within the range of ZM connectors - see linked products.
