The superior quality of the **Horizon faceplate style** has been designed to suit both traditional and contemporary interiors. Produced with square corners, it features **trimless switches** for exceptional product reliability. To ensure design uniformity throughout a project, non-standard accessories can be made to suit requirements.

Architrave light switches are narrow switches commonly used in areas where space is restricted. They are specifically designed to blend with architraves, and they are often installed between two door frames or near corners or obstacles where a standard switch simply wouldn't fit due to their slim design. A discreet, space-saving solution for controlling lighting and other electrical devices near door frames.

Please note: this product must be used with our 1715 backbox.
