General

Colour White

Dimensions

Height	97mm
Length	2m
Width	29mm

Clean, modern lighting profile suitable for either up or down lights for indirect light.

Installation remark: use an aluminium tape on the inside of the profile, or an aluminium LED support to avoid the light showing through the moulding. In some cases we recommend applying an additional black paint coat on the inside of the profile.

Choose direction of the light before installing.

- Uplighter: First fit the Orac Decor moulding and then insert the LED strip
- Downlighter: First mount the LED strip against the wall and then install the Orac Decor Moulding over it. If using the coving as a downlighting we recommend using an aluminium profile.

All products have a matte primed surface, they are ready to paint. We advise to use water-based paint, and in case another type of finishing is used, we recommend prior testing. We are not responsible for the result after manipulation.
