Width	46mm

Electrical

Amperage	10A
Voltage	240V

Inspired by traditional wooden dolly switches, this Classic Period Round Dome Dolly Switch offers the same timeless charm with the benefits of modern materials.

The plate is made from durable plastic and features double insulation for electrical safety, while its wood-like texture and appearance provide an authentic vintage feel. The dome base is crafted from porcelain, and the cap is made of metal. The Heritage Clipsal 1920/30 (now Schneider Electric) switch is available in various finishes and comes with a single 2-way dark brown toggle lever, along with a rear mounting bracket. There are two installation options: it can be mounted directly onto the wall using the included bracket, or it can be fitted into any standard metal back box. Terminals accommodate 3 x 2.5mm² Cables

Perfect for period restorations or adding a touch of heritage to contemporary interiors.
