General

Colour Stainless Steel

Construction Steel

Dimensions

Length 2m

The Steel Cove Extrusion Profile is able to be installed vertically or horizontally which makes it suitable for a seamless installation within a wall, ceiling, or drywall installations.

This deeper profile provides a greater separation between the LED tape and the surrounding ceiling or wall, resulting in a softer and more diffused indirect lighting effect. Its increased height makes it ideal for drop ceiling applications where a smoother, more ambient glow is desired, while fully concealing the LED source for maximum visual comfort. The added depth allows the light to spread more gradually, creating a refined, floating ceiling appearance with reduced glare and an overall more architectural finish.

Key Features

- Creates a greater separation, allowing for smoother light diffusion and a softer, reduce glare glow
- Offers a deeper, more architectural aesthetic with a clean, fully concealed LED source.
- Delivers a refined indirect lighting effect, ideal for enhancing ambient illumination in drop ceiling designs
