

MJS SLAVE

Quicklink: Q6F12

General

Colour	Black
Construction	Plastic

Electrical

Voltage	240V
---------	------

The **Varilight MJS** is a V-Pro Multiway Companion Controller Module, designed to work in conjunction with a V-Pro Multiway (MJM100 - Available separately).

It enables full rotary dimming control from additional locations in 2-way or 3-way lighting circuits, allowing the same lighting load to be dimmed, brightened, and switched on or off from up to three separate positions.

This module does not control the electrical load directly and cannot be used on its own. All dimming is carried out by the master dimmer, while the companion controller sends control signals to it.

Key Features

- Multi-way companion controller module
- Enables rotary dimming from additional locations
- Supports up to 3 control positions: 1 × Master Dimmer // Up to 2 × Companion Controllers
- Identical push on/off and rotary dimming action at every position
