Laser Track Configurator Innovative **Laser magnetic ultra-slim trimless track** lighting system, a perfect combination between the ultra-slim track and LED fixtures. Designed to provide both flexibility and convenience in illuminating your space. The Laser Track Lighting system has a modern design, engineered for plaster-in installation. The track can be cut to any length.

The ultra-slim 48V magnetic track system not only emphasizes rapid installation of the modules, it also creates a clean and modern appearance. The magnetic fittings securely attach to the track, allowing you to easily move your light fittings whenever necessary. Whether you want to change the lighting arrangement in a room or experiment with different angles, it offers the freedom to adapt your lighting setup without any hassle.

The maximum length from the remote LED Driver to the Laser Track is 10 metres.

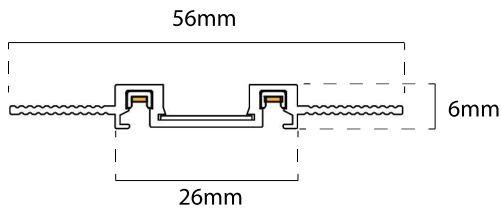

Installation Options

Our Magnetic Track System offers three convenient installation options to suit your lighting needs. These options allow you to position the driver/power feed anywhere along the track, not just at the ends. *Please, consider the driver and installation method before plaster-in.*

- 1. Switching Option (Local Driver): Seamlessly integrate the local driver directly into the track, providing on/off control. This option ensures simplicity and ease of use, making it ideal for areas where an uncomplicated installation is desired.
- 2. Dimmable Option (Local Driver): Seamlessly integrate the local dimmable driver directly into the track, providing smooth dimming control functionality. This option ensures simplicity and flexibility, making it ideal for spaces where adjustable lighting and straightforward installation are desired.
- 3. Remote Option (Remote Driver): This installation allows you to connect a remote driver to the Laser Power Feed, keeping the ceiling line entirely clean and free of visible driver components.
