General

Colour	Chrome
Construction	Steel
IP Rating	IP00

Electrical

Voltage	12V
---------	-----

Wire Tensioners can be ceiling or wall mounted but need to be securely fixed to ensure that the *PVC Coated Wire Cable* stays taut. They can also be used for direct connection to the *The Wire Transformer*. The *Trapeze Wire System* can be run to a maximum length of 6 metres with a maximum wattage of 300W.

A solid core cable must be used to connect power from the *Wire Transformer* to the *Wire Tensioner*, the *PVC Coated Wire Cable* must not be used for this purpose. Alternatively, as long as the single strands of the transformer cable are bundled together tightly into one piece and soldered if possible, it can be connected to the *PVC Coated Wire Cable* via a *Wire Floating Live End* or more directly via the *Wire Tensioner*.

For further detail on connecting all cables to the *Wire Tensioners*, please see the technical tab.
