Voltage	240V

The **Lyneo** makes all the difference to the ambience in a room. Instead of old-fashioned on/off lighting, you can match the level of light to the mood or activity. Changing a switch to a dimmer is simple. This range of slide dimmers comes in different finishes to match your decor.

The slider is used to change the light level. The on/off button turns the circuit on or off, with the blue LED status light indicating if the dimmer is in use.

Important Notes

- Only use electronic transformers when using this switch to dim low voltage fittings such as downlighters
 - To avoid overheating and possible damage to other equipment, do not use this product to control fluorescent lighting fixtures, motor-operated or transformer supplied appliances
 - Only preset dimmers can be used in a 2 way circuit
 - The dimmer requires a minimum lamp wattage of 40W. Do not exceed the maximum rating of 500W
 - Not suitable for low voltage load types
-
