Starter Single Circuit Track is supplied with live end cap and fixing clips, and gives you everything required to start your track lighting system.

The Single Circuit Track is a type of lighting system used in various environments, including commercial and residential spaces. It features a track containing a single conductive pathway, or circuit. In this setup, all the light fixtures connected to the track are controlled simultaneously. This simplicity can be advantageous for applications where uniform lighting is desired across a space. You are able to mix and match any fitting from the **240V Single Circuit Track** ranges on the same track, and there is no limit to the amount of light fittings you can use.

Please Note: The 3M length of this product can only be delivered to the London area, or collected from store, due to size / fragile product.

You are able to cut your track to whatever length you require.
