General

Construction Plastic
IP Rating IP00

Radio Frequency 433.9MHz

Dimensions

Depth 50mm
Height 136mm
Width 36mm

Electrical

Voltage 12V DC

The **RAKO Infrared to RF Interface** allows scene control from hand held infrared remote controls, making it great for home cinema rooms. Combine lighting and AV equipment for the whole experience. Can also be used for other systems that have IR control outputs.

In factory default setting, the unit will control a single room with Scenes 1-4, off and master raise & lower.

When configured with the **RAKO PC Software Suite**, it is possible to select 'multi-room' mode and control up to four separate rooms from one unit. In 'multiroom' mode it is also possible to raise and lower individual dimmer channels.

The **RAKO 12V dc Power Adapter** is also required for this product.
