### General

Cap	GU10
Colour	White
Construction	Aluminium / Plastic
IP Rating	IP00

Music Operation Threshold	>60 dB
---------------------------	--------

### Dimensions

Diameter	65mm
Length	105mm

### Electrical

Maximum Wattage	5W
Transformer	Not Required

### Light Characteristics

Beam Angle	35°
Lumens	102.5 lm
Lumens Per Watt	21 lm/W

The **Longnose Karaoke Kit** has all the necessary components to achieve sound to light colour change LED lighting. The complete kit makes it easy to buy as all the parts are put together for you. The Kit can be used in domestic or commercial applications. The Longnose Karaoke kit will create astonishing colour effects. Watch (or dance!) as different colours turn on to the beat of your music, reproducing the full club effect without leaving your home!

### Kit Contents

- 1 x S1LN100: Long Nose Spotlight
- 1 x KARAOKE GU1: Karaoke LED Colour Changing Lamp + Remote

The **Longnose Karaoke Kit** is a revolutionary new LED kit with easy remote controlled colour change lighting. It also has four built in colour changing programs. Two preset programs scroll through a range of colours, whilst the remaining programs are automatically controlled via surrounding sounds. Watch (or dance!) as different colours turn on to your music beat, reproducing the full club effect without leaving your home!

The kit includes the **Long Nose Spotlight** which has a longer body than a standard GU10 spotlight, meaning that elongated bulbs such as the LED retrofit lamp can be used without the light source protruding.

The lamp is controlled via an infrared remote powered by a lithium CR2025 battery (all included as part of the package). Simply aim the remote at the light to change light program, light intensity, light colour or simply turn the lamp on/off.

There are 16 different colours available (including white), all of which have four different levels of brightness. There are also four colour changing programs available. The two standard program modes are Flashing (flashing colour changing, starting on red) and Fade (fast fading colour changing, starting on white). Pressing the up or down buttons in both of these modes increases the speed of the colour changing.

The first of the two music programs sets the currently selected colour to turn on at each beat, quickly turning off on the offbeat. On the next beat, the lamp will turn on again, producing the next colour in the cycle. No beat, no light! The second music program carries out the same function, although operates in Fade mode when there is no musical beat. The light intensity can be increased/decreased in ten steps during both these musical programs by simply pressing the up or down keys on the remote.

Please note that synchronicity between functions cannot be guaranteed if lamps are located at distances that are not in line of sight of the remote. A single remote can control multiple lamps. We can also not guarantee that this lamp will fit all light fittings. Please check measurements before purchase. For more information on the remote operation, please click on the technical tab.
